

Rescue Step-By-Step Instruction Manual

INSTRUCTIONS AND WARNING

WARNING!

Proper use of all arrest systems can help save lives and may reduce the potential for serious injuries from a fall. Users must read and understand the instructions provided with the product and be properly trained by their employer prior to use per OSHA 29 CFR 1910.66 and 1910.67. Follow the labels all warnings or misuse of equipment could result in serious injury or death. Consult a physician if there is any question about the user's ability to use the product. If you have questions, call SafeWaze.

Before using a personal fall arrest system, employees must be trained in accordance with the requirements of OSHA 29 CFR 1910.66 in the safe use of the system and its components.

Employers must have a rescue plan and equipment to be installed in accordance that provides the prompt rescue of employees in the event of a fall or assures that employees are able to rescue themselves.

Always use equipment ONLY for the purpose for which it was designed and intended. NEVER use positioning equipment where a personal fall arrest system is required.

Full arrest equipment must be inspected prior to each use for wear, damage and other deterioration, and defective components must be immediately removed from service, in accordance with the requirements of OSHA 29 CFR 1910.66 and 1910.67.

Always use compatible components. SafeWaze products are designed for use with other SafeWaze products. Substitution or replacement with non-approved component combinations or substitutions may affect or interfere with the safe function of each other. Contact your SafeWaze representative for information on system usage.

OSHA 29 CFR 1910.66 and 1910.67 state that the full arrest system must be rigged such that the employee can neither free fall more than 6 feet nor contact any lower level (see Fig. 1). Always check for obstruction below the work area and ensure the full catch is clear.

OSHA requires that the maximum arresting force imposed on the user's body must not exceed 1,800 pounds. See label for specific product rating. Just all fall protection components are used for the same task user working level. Users must be within each component's capacity range.

Maximum working load is 210 pounds, including clothing and tools. NOTE: Heavyweight products' maximum working load is 400 pounds.

Extreme care must be taken when using equipment around moving machinery, electrical hazards, or near sharp edges and abrasive surfaces. DO NOT use near electrical lines or other energized sources.

All synthetic materials must be protected from fire, hot sparks, open flames or other heat sources. The use of heat resistant materials is recommended in these applications.

Horizontal hazards should be considered when selecting fall protection equipment. Equipment must not be exposed to chemicals or heat sources that may produce a harmful effect.

Anchorages used for attachment of personal fall arrest systems must be independent of any anchorages used to support or support platforms.

Anchor points must be kept above and to the rear of the Dring. Never attach a ladder or other work area to a Dring. Never attach multiple snap hooks to a Dring.

Anchorages must be used for its designed purpose. NOT for loading of lines.

Always work directly underneath the anchorage to avoid swing fall injuries (pendulum effect).

NEVER allow slack in the cable or other fall protection equipment. DO NOT stand on the cable/web.

Any equipment that has been subjected to a fall, or if any part of the load indicator warning is showing, must be immediately removed from service until a qualified person, as defined by OSHA 29 CFR 1910.329, can determine the need for authorized repair or disposal.

Never attempt to repair equipment. Repairs must be performed only by the equipment manufacturer or persons/companies authorized in writing by the manufacturer.

Connecting to Full Body Harness

Energy absorbing lanyards with a shock pack must only be connected with the energy absorbing end of the lanyard connected to the back D-ring of the harness (see Fig. 12). ALWAYS make sure that any snap hooks or carabiners are completely closed and locked. NEVER attach your connecting device to a Dring other than the one on the back when using equipment for fall arrest.

Connecting to the Anchorages or Anchorage Connector

Single-Leg Energy-Absorbing Lanyards: Connect the end of the lanyard to the anchorage or anchorage connector.

Double-Leg Energy-Absorbing Lanyards: Connect one end of the lanyard to the anchorage or anchorage connector. The additional leg is to be used whenever the user remains in a free location, ensuring 100% level of AWWT. Connect the lanyard to the new location or anchorage connector the first lanyard end.

Single-Anchore Vertical Lifelines: Attach the connector of the lifeline to the approved anchorage or anchorage connector. The lifeline must be installed as applicable to provide over the intended work area to reduce the possibility of dangerous swing falls.

WARNING! OSHA 29 CFR 1910.66 and 1910.67 state that the full arrest system must be rigged such that the employee can neither free fall more than 6 feet nor contact any lower level (see Fig. 1). Always check for obstruction below the work area and ensure the full catch is clear.

OSHA requires that the maximum arresting force imposed on the user's body must not exceed 1,800 pounds. See label for specific product rating. Just all fall protection components are used for the same task user working level. Users must be within each component's capacity range.

Maximum working load is 210 pounds, including clothing and tools. NOTE: Heavyweight products' maximum working load is 400 pounds.

Extreme care must be taken when using equipment around moving machinery, electrical hazards, or near sharp edges and abrasive surfaces. DO NOT use near electrical lines or other energized sources.

All synthetic materials must be protected from fire, hot sparks, open flames or other heat sources. The use of heat resistant materials is recommended in these applications.

Horizontal hazards should be considered when selecting fall protection equipment. Equipment must not be exposed to chemicals or heat sources that may produce a harmful effect.

Anchorages used for attachment of personal fall arrest systems must be independent of any anchorages used to support or support platforms.

Anchor points must be kept above and to the rear of the Dring. Never attach a ladder or other work area to a Dring. Never attach multiple snap hooks to a Dring.

Anchorages must be used for its designed purpose. NOT for loading of lines.

Always work directly underneath the anchorage to avoid swing fall injuries (pendulum effect).

NEVER allow slack in the cable or other fall protection equipment. DO NOT stand on the cable/web.

Any equipment that has been subjected to a fall, or if any part of the load indicator warning is showing, must be immediately removed from service until a qualified person, as defined by OSHA 29 CFR 1910.329, can determine the need for authorized repair or disposal.

Never attempt to repair equipment. Repairs must be performed only by the equipment manufacturer or persons/companies authorized in writing by the manufacturer.

Connecting to Full Body Harness

Energy absorbing lanyards with a shock pack must only be connected with the energy absorbing end of the lanyard connected to the back D-ring of the harness (see Fig. 12). ALWAYS make sure that any snap hooks or carabiners are completely closed and locked. NEVER attach your connecting device to a Dring other than the one on the back when using equipment for fall arrest.

Connecting to the Anchorages or Anchorage Connector

Single-Leg Energy-Absorbing Lanyards: Connect the end of the lanyard to the anchorage or anchorage connector.

Double-Leg Energy-Absorbing Lanyards: Connect one end of the lanyard to the anchorage or anchorage connector. The additional leg is to be used whenever the user remains in a free location, ensuring 100% level of AWWT. Connect the lanyard to the new location or anchorage connector the first lanyard end.

Single-Anchore Vertical Lifelines: Attach the connector of the lifeline to the approved anchorage or anchorage connector. The lifeline must be installed as applicable to provide over the intended work area to reduce the possibility of dangerous swing falls.

WARNING! OSHA 29 CFR 1910.66 and 1910.67 state that the full arrest system must be rigged such that the employee can neither free fall more than 6 feet nor contact any lower level (see Fig. 1). Always check for obstruction below the work area and ensure the full catch is clear.

OSHA requires that the maximum arresting force imposed on the user's body must not exceed 1,800 pounds. See label for specific product rating. Just all fall protection components are used for the same task user working level. Users must be within each component's capacity range.

Maximum working load is 210 pounds, including clothing and tools. NOTE: Heavyweight products' maximum working load is 400 pounds.

Extreme care must be taken when using equipment around moving machinery, electrical hazards, or near sharp edges and abrasive surfaces. DO NOT use near electrical lines or other energized sources.

All synthetic materials must be protected from fire, hot sparks, open flames or other heat sources. The use of heat resistant materials is recommended in these applications.

Horizontal hazards should be considered when selecting fall protection equipment. Equipment must not be exposed to chemicals or heat sources that may produce a harmful effect.

Anchorages used for attachment of personal fall arrest systems must be independent of any anchorages used to support or support platforms.

Anchor points must be kept above and to the rear of the Dring. Never attach a ladder or other work area to a Dring. Never attach multiple snap hooks to a Dring.

Anchorages must be used for its designed purpose. NOT for loading of lines.

Always work directly underneath the anchorage to avoid swing fall injuries (pendulum effect).

NEVER allow slack in the cable or other fall protection equipment. DO NOT stand on the cable/web.

Any equipment that has been subjected to a fall, or if any part of the load indicator warning is showing, must be immediately removed from service until a qualified person, as defined by OSHA 29 CFR 1910.329, can determine the need for authorized repair or disposal.

Never attempt to repair equipment. Repairs must be performed only by the equipment manufacturer or persons/companies authorized in writing by the manufacturer.

Connecting to Full Body Harness

Energy absorbing lanyards with a shock pack must only be connected with the energy absorbing end of the lanyard connected to the back D-ring of the harness (see Fig. 12). ALWAYS make sure that any snap hooks or carabiners are completely closed and locked. NEVER attach your connecting device to a Dring other than the one on the back when using equipment for fall arrest.

Connecting to the Anchorages or Anchorage Connector

Single-Leg Energy-Absorbing Lanyards: Connect the end of the lanyard to the anchorage or anchorage connector.

Double-Leg Energy-Absorbing Lanyards: Connect one end of the lanyard to the anchorage or anchorage connector. The additional leg is to be used whenever the user remains in a free location, ensuring 100% level of AWWT. Connect the lanyard to the new location or anchorage connector the first lanyard end.

Single-Anchore Vertical Lifelines: Attach the connector of the lifeline to the approved anchorage or anchorage connector. The lifeline must be installed as applicable to provide over the intended work area to reduce the possibility of dangerous swing falls.

WARNING! OSHA 29 CFR 1910.66 and 1910.67 state that the full arrest system must be rigged such that the employee can neither free fall more than 6 feet nor contact any lower level (see Fig. 1). Always check for obstruction below the work area and ensure the full catch is clear.

OSHA requires that the maximum arresting force imposed on the user's body must not exceed 1,800 pounds. See label for specific product rating. Just all fall protection components are used for the same task user working level. Users must be within each component's capacity range.

Maximum working load is 210 pounds, including clothing and tools. NOTE: Heavyweight products' maximum working load is 400 pounds.

Extreme care must be taken when using equipment around moving machinery, electrical hazards, or near sharp edges and abrasive surfaces. DO NOT use near electrical lines or other energized sources.

All synthetic materials must be protected from fire, hot sparks, open flames or other heat sources. The use of heat resistant materials is recommended in these applications.

2002

Slide the shoulder straps over your arms as you would a jacket and into position on the shoulders. The full arrest attachment Dring should be in the upper middle portion of your back (see Fig. 4). Check to be sure that the webbing is not twisted.

At this time, attach the chest strap (used to prevent harness from slipping off) to your shoulders (see Fig. 2, item 8, and Fig. 5).

The leg portion of the leg straps will be hanging down behind you. Pull this portion between the legs, adjust to length and connect to the connecting buckle of the other end of the leg strap (see Fig. 4). Make sure that the leg straps are not twisted or knotted. Secure the excess webbing with the waste band keepers.

Correct waist belt. If present. This strap should not be used, but should be kept (see Fig. 7).

After all the straps have been secured, tighten and adjust all straps and secure excess webbing so harness fits well. A shoulder allow a full range of movement and be snug (see Fig. 8).

MATING BUCKLE CONNECTION

The buckle on the sector post must pass under the square hole (see Fig. 9, item A).

The center bar buckle should be turned so that the narrow side runs under the square hole (see Fig. 9, item B).

Only attach the end of the strap to the largest loop of the largest strap keeper.

Full arrest devices must only be connected to the D-ring located on the back of the harness. The side, front and chest Drings are for positioning only. Shoulder Drings are for rescue only.

Always visually check that all buckles are properly connected before use.

NEVER attach multiple snap hooks to a D-ring.

LABELING

Harness labels are positioned similar to that indicated in Fig. 10. For example label size Fig. 11.

CONNECTION REQUIREMENTS

OSHA 29 CFR 1910.66 and 1910.67 prohibit users from being engaged to certain critical units two requirements are met:

1. snap hook must be a locking type; and

2. must be designed for making such a connection.

Designed for means that the manufacturer of the snap hook specifically designed the snap hook to be used to connect to the equipment in question.

Snap hooks must be engaged:

-to a D-ring, to which another snap hook or other connector is attached;

-to a horizontal lifeline;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

-to a D-ring, to which another snap hook or other connector is attached;

ADVERTENCIA!

El uso adecuado de los sistemas de detención de caídas puede ayudar a salvar vidas y puede reducir la posibilidad de lesiones graves a causa de una caída. Los usuarios deben leer y entender las instrucciones proporcionadas con el producto y estar adecuadamente entrenados por su empleador antes de usar el producto de acuerdo con OSHA 29 CFR 1910.66 y 1910.67. El cumplimiento de todas las advertencias a nivel del equipo puede resultar en lesiones graves e incluso la muerte. Consulte a un médico si hay alguna duda sobre la capacidad del usuario para utilizar el producto. Si tiene alguna pregunta, llame a SafeWaze EE.UU.

Antes de utilizar un sistema de detención de caídas, los empleados deben ser formados de acuerdo con los requisitos de la norma 29 CFR 1910.66 en el uso seguro del sistema y sus componentes.

Los patrones deben leer un plan de rescate, y los métodos para ponerlo en práctica, que proporcionen el rescate inmediato de los trabajadores caso de una caída, o asegurar que los empleados son capaces de rescatarse a sí mismos.

Equipos de protección contra caídas deben ser utilizados únicamente para el propósito para el que han sido diseñados y verificados. NUNCA utilice un posicionamiento cuando se requiere un sistema de detención de caídas.

El equipo de detención de caídas debe ser inspeccionado antes de cada uso para el desgaste, daños y otros defectos, y los componentes defectuosos se deben retirar inmediatamente del servicio de conformidad con los requisitos de la norma 29 CFR 1910.66 y 1910.67.

Siempre usar componentes compatibles. SafeWaze productos están diseñados para usarse con otros productos SafeWaze. La sustitución o reemplazo con combinaciones o sustituciones no aprobadas o sustituciones puede afectar o interferir con el funcionamiento seguro de la serie OSHA 29 CFR 1910.66 y 1910.67.

OSHA requiere que la fuerza de detención máxima impuesta sobre el cuerpo del usuario no deba exceder las 1,800 libras. Consulte el etiquetado de calificación específica del producto.

Cada día los componentes de protección contra caídas clasificados para el mismo peso en el momento de su uso.

Los usuarios deben estar dentro del alcance de la capacidad de carga del componente.

Los trabajos mínimos en un 30 lb, incluyendo el uso de las herramientas. NOTA: Productos de peso pesado, de carga máxima de hasta 40 lb.

El cuidado extremo debe ser tomado al usar el equipo alrededor de maquinarias en movimiento, resacas eléctricas, o cerca de los bordes afilados (ver Fig. 10).

Evite el contacto con superficies de fricción abrasiva o otros materiales peligrosos.

Los peligros ambientales deben ser considerados al seleccionar el sistema de protección contra caídas. El equipo no debe estar expuesto a productos químicos o volátiles durante el uso que puedan producir un efecto eléctrico.

Los equipos diseñados para el apoyo de los sistemas de detención de caídas deben ser independientes de cualquier anclaje que se utilice para suspender o estabilizar los arcos.

Puntos de anclaje deben mantenerse por encima de la parte superior del hombro. Nunca conectar una escalera o los ganchos para varilla en un punto D.

Nunca utilizar los arcos para el propósito de un punto de anclaje. NO usar el remolque o el levantamiento.

Siempre se debe trabajar directamente debajo del anclaje para evitar lesiones por caídas de colisión (ver Fig. 10).

NUNCA permita haber un cable web, o permita que se enrolle con otros objetos. No se agarre en el cable web.

Cualquier equipo que haya sido sometido a una caída, o a cualquier parte de la advertencia de indicador de carga está mostrando, debe retirarse inmediatamente del servicio hasta que una persona calificada, según lo definido por la norma 29 CFR 1910.329 (m), sea capaz de determinar la necesidad de autorización para su reutilización.

Nunca modifique ni intente reparar el equipo. Las reparaciones deben ser realizadas únicamente por el fabricante del equipo o de la persona responsable autorizada por escrito por el fabricante.

Conectando al Full Body Harness

Energy absorbing lanyards with a shock pack must only be connected with the energy absorbing end of the lanyard connected to the back D-ring of the harness (see Fig. 12). ALWAYS make sure that any snap hooks or carabiners are completely closed and locked. NEVER attach your connecting device to a Dring other than the one on the back when using equipment for fall arrest.

Conectando a los Anclajes o Anchorage Connector

Single-Leg Energy-Absorbing Lanyards: Connect the end of the lanyard to the anchorage or anchorage connector.

Double-Leg Energy-Absorbing Lanyards: Connect one end of the lanyard to the anchorage or anchorage connector. The additional leg is to be used whenever the user remains in a free location, ensuring 100% level of AWWT. Connect the lanyard to the new location or anchorage connector the first lanyard end.

Single-Anchore Vertical Lifelines: Attach the connector of the lifeline to the approved anchorage or anchorage connector. The lifeline must be installed as applicable to provide over the intended work area to reduce the possibility of dangerous swing falls.

WARNING! OSHA 29 CFR 1910.66 and 1910.67 state that the full arrest system must be rigged such that the employee can neither free fall more than 6 feet nor contact any lower level (see Fig. 1). Always check for obstruction below the work area and ensure the full catch is clear.

OSHA requires that the maximum arresting force imposed on the user's body must not exceed 1,800 pounds. See label for specific product rating. Just all fall protection components are used for the same task user working level. Users must be within each component's capacity range.

Maximum working load is 210 pounds, including clothing and tools. NOTE: Heavyweight products' maximum working load is 400 pounds.

Extreme care must be taken when using equipment around moving machinery, electrical hazards, or near sharp edges and abrasive surfaces. DO NOT use near electrical lines or other energized sources.

All synthetic materials must be protected from fire, hot sparks, open flames or other heat sources. The use of heat resistant materials is recommended in these applications.

Horizontal hazards should be considered when selecting fall protection equipment. Equipment must not be exposed to chemicals or heat sources that may produce a harmful effect.

Anchorages used for attachment of personal fall arrest systems must be independent of any anchorages used to support or support platforms.

Anchor points must be kept above and to the rear of the Dring. Never attach a ladder or other work area to a Dring. Never attach multiple snap hooks to a Dring.

Anchorages must be used for its designed purpose. NOT for loading of lines.

Always work directly underneath the anchorage to avoid swing fall injuries (pendulum effect).

NEVER allow slack in the cable or other fall protection equipment. DO NOT stand on the cable/web.

Any equipment that has been subjected to a fall, or if any part of the load indicator warning is showing, must be immediately removed from service until a qualified person, as defined by OSHA 29 CFR 1910.329, can determine the need for authorized repair or disposal.

Never attempt to repair equipment. Repairs must be performed only by the equipment manufacturer or persons/companies authorized in writing by the manufacturer.

TECHNICAL DATA SHEET

FS902 Rescue Support Steps

Description	Safewaze™ rescue support steps are designed to relieve pressure and promote circulation until the fall victim is able to be rescued.
Instructions	Place the loop through the lower D-ring slot, closest to the webbing, and pull the bag through loop to cinch
Length	70" (1.78 m)
Maximum Working Load	400 lbs (140.61 kg)
Weight	0.25 lbs (0.11 kg)

Rescue Support Steps

INSTALLATION / USAGE INSTRUCTIONS

WARNING!!!!

FAILURE TO READ AND UNDERSTAND THESE INSTALLATION INSTRUCTIONS MAY RESULT IN SERIOUS INJURY OR DEATH

ENSURE THAT THE FS902 RESCUE SUPPORT STEPS HAVE NOT BEEN DAMAGED DURING SHIPPING PRIOR TO USE.

THE FS902 IS AN ENGINEERED PRODUCT. IF DAMAGED, IT MUST BE REMOVED FROM SERVICE AND MARKED FOR DISPOSAL.

SYNTHETIC STRAPS SHOULD NOT BE USED IN EXCESS OF 200° F TO AVOID DAMAGE FROM HEAT, WELDING SPLATTER/ SPARKS, AND CORROSIVE CHEMICALS.

IMPORTANT!!!!

CAREFULLY READ ALL INSTALLATION AND SPECIFICATION INSTRUCTIONS REGARDING THE USE OF THIS PRODUCT.

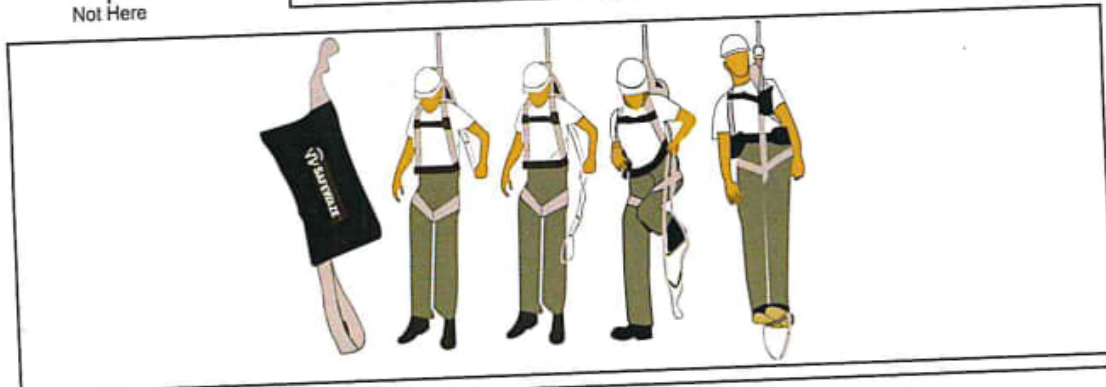

Installation

Place the fixed loop of the Rescue Support Steps through the slot in the Harness D-ring. Pull bag back through the loop and cinch it to the side of the D-ring slot.

Note: DO NOT attach to circular portion of D-ring.

Once a fall has occurred, open bag by pulling apart the velcro fastener on bottom of bag, or pulling on pullout loop, allowing the stirrup straps to be pulled out. Place feet in stirrups of the strap for support.

Inspection

All Rescue Support Steps must be inspected prior to each use.

All webbing must be inspected for tears, cuts, fraying, abrasion, discoloration, burns, holes, mold, or other signs of wear and damage.

All Rescue Support Steps must be free of corrosion, chemical exposure, alteration, excessive heating, or wear.

If inspection reveals any defect, inadequate maintenance, or unsafe condition, remove from service and mark for disposal.

Cleaning and Maintenance

Rescue support steps can be wiped down with a mild detergent and clean water solution, and rinsed with a dampened cloth to remove detergent. No maintenance is required for this product.
